

## The Geography Curriculum

School admissions will reflect the local community, with its vibrant and diverse range of cultures, which make EC1 and the local area a very exciting place to live and learn. We believe the place of geography in our curriculum is essential to develop a strong understanding of people, places and global citizenship and as such, we look to fully exploit Geography's potential to enable COLPAI children to make sense of the wider world. Our curriculum aims to inspire a lifelong fascination and curiosity about people and places of the world, equipping children with knowledge of:

- Diverse places
- People
- Resources
- The world's natural and human environments
- Earth's physical and human processes
- As pupils progress they will deepen their understanding of:
  - The interaction between physical and human processes
  - The formation and use of landscapes and environments.

Our engaging half termly projects and multi-media resources engage the children in creative learning outcomes such as creating their own RAP about America, recording their own weather forecast, and creating their own archaeological dig. Taking learning outside of the classroom is something that we also value greatly at COLPAI and we therefore aim to make the most of such opportunities to ensure learning is vivid and real and fosters an inquisitive mind about the world in which we live.
